

MUHAMMAD ROMADHON S

wa.me/6281368803848 | muhammad.romadhonsan@gmail.com | <https://www.linkedin.com/in/rmdnsantoso>

Kota Palembang, Sumatera Selatan.

I am a 6th-semester Informatics Engineering student at Institut Teknologi Sumatera (ITERA) with a strong interest in Web Development and AI Engineering. I am experienced in building full-stack applications using Next.js and Laravel to provide real-world solutions for daily needs, MSMEs, and village communities. I am a dedicated problem solver and an active member of the Informatics Student Association (HMIF) ITERA.

Education Level

SMA Negeri 8 Palembang - Kota Palembang, Sumatera Selatan.

Aug 2020 - Apr 2023

Senior High School, Graduated with a major in Natural Sciences (IPA), successfully balancing academic rigor with extracurricular engagement. Cultivated an early passion for technology through the Computer Club and honed leadership and supervisory skills as an administrator of the Class Representative Assembly (MPK)

- Vice Chairman, Computer Club at SMA Negeri 8 Palembang (2021–2022)
- Member, Class Representative Assembly (Student Legislative Body) (2021–2022)

Institut Teknologi Sumatera - Kabupaten Lampung Selatan, Lampung.

Aug 2023

Undergraduate Program in Informatics Engineering, I specialize in Web Development and AI Engineering, building a strong technical foundation in Algorithms, Data Structures, and OOP. My expertise extends to AI Model Training and SQL for designing Information Systems aligned with business models.

- Last GPA 3.23/4.00

Organisational Experience

Himpunan Mahasiswa Informatika ITERA - Kabupaten Lampung Selatan, Lampung.

Mar 2025 - Dec 2025

Executive Board – Staff of Business Funding Division (BUMH)

Active as a Staff member of the Business Funding Division (BUMH), where I managed merchandise and fundraising initiatives to support the organization's financial needs. This role honed my skills in inventory management, transaction recording, and teamwork.

- Led the Pre-Order Project: Managed the full cycle of the Association Jacket project, from coordinating with vendors to distributing items to members.
- Sales Achievement: Successfully achieved a sales volume of 126 units, generating a total turnover of IDR 25 million.
- Financial Accountability: Took responsibility for recording all transactions and fund recapitulation to ensure precise financial reporting.

Himpunan Mahasiswa Informatika ITERA - Kabupaten Lampung Selatan, Lampung.

Jan 2026 - Present

Legislative Body – Head of Commission 1, Member Representative Council (DPA)

Leads the organizational legislative function with a focus on constitutional enforcement and internal oversight. Responsible for ensuring the accountability of the Executive Board through objective and measurable evaluation mechanisms.

- Supervised 5 legislative staff members in drafting organizational decrees and legal frameworks.
- Managed the Articles of Association/Bylaws (AD/ART) and facilitated regulatory review forums to ensure legal compliance.
- Conducted routine evaluative monitoring of the Internal Department of HMIF ITERA to maintain organizational quality standards.

Skills, Achievements & Other Experience

- **Latihan Dasar Organisasi dan Profesi HMIF ITERA (2024):** Completed an intensive development program focused on professional ethics standards and organizational management. Acquired technical competencies in Web Programming and UI/UX Design, alongside professional personal branding strategies to ensure career readiness in the tech industry.
- **Projects - SKPL Sistem Check-In Bandara Mandiri (2024):** Designed the comprehensive technical architecture for a Client-Server Airport Self Check-In System. I authored industry-standard Software Requirements Specification (SRS) documents, conducting in-depth system modeling using DFD Level 2 and UML to streamline ticket validation, baggage handling, and airline API integration. Furthermore, I designed a complex relational database structure (ERD) and implemented AES-256 encryption protocols to guarantee the security of sensitive passenger information.
- **Projects - Game Taleshire The Unknown Legend (2024):** Developed Taleshire: The Unknown Legend, a 2D adventure game built with Python and Pygame. I spearheaded the Level Design process, utilizing Tiled Map Editor to create intricate world maps. On the technical side, I implemented deep Object Oriented Programming (OOP) principles including Inheritance and Polymorphism to design dynamic entity structures and turn-based combat mechanics. This project demonstrated my ability to combine creative design with efficient, modular code architecture.
- **Media Partner Staff - Informatics Festival 2025 (2025):** Joined the Media Partner team for Informatics Festival 2025, the joint anniversary celebration of the Informatics Department and HMIF ITERA. My primary role focused on expanding the event's public visibility by establishing collaborations with external media partners and campus press. These efforts ensured widespread publication

and effective promotion of the festival's agenda.

- **Head of Funding Division - HMIF Refreshment 2025** (2025): Entrusted as the Head of Funding Division for HMIF Refreshment 2025, a post-midterm organizational bonding event. In this role, I led the team in devising and executing strategic fundraising initiatives. My primary focus was ensuring the achievement of budget targets to guarantee the smooth operational flow of the event.
- **Latihan Kepemimpinan dan Manajemen Organisasi HMIF ITERA** (2025): Participated in the Latihan Kepemimpinan dan Manajemen Organisasi HMIF ITERA, a program designed to prepare future leaders for organizational succession. While the curriculum focused on strategic governance, the program culminated in a technical challenge. I successfully completed the final project by developing a website aligned with the assigned theme, allowing me to sharpen my Web Development skills in a practical, deadline-driven environment.
- **Projects - Go-Wes ITERA Smart Bike Rental System** (2025): Initiated Go-Wes ITERA, a web-based platform developed as the capstone project for the Organizational Management Training (LKMO). Designed to support the Smart Campus vision, this system digitized the manual bike loaning process. I played a key role in designing the information flow and building the full-stack architecture using React.js, Tailwind CSS, Node.js, and MySQL. The result was an intuitive interface that allows students to monitor bike availability and access eco-friendly transport services in real-time.
- **Projects - ACADEMORA** (2025): Designed the UI/UX for ACADEMORA, a productivity application tailored for university students. Adopting the Design Thinking approach, I created an interactive High-Fidelity Prototype using Figma that integrates time management and academic scheduling features. To ensure design effectiveness, I conducted rigorous Usability Testing, which resulted in a System Usability Scale (SUS) score of 80.5 (Grade A), validating the product's high usability standard.
- **Projects - Artificial Neural Network (ANN) Predictive Model for Iris Classification** (2025): Developed a neural network model to classify Iris Flower species (Setosa, Versicolor, Virginica) based on morphological features. Utilizing TensorFlow and Keras, I performed end-to-end data processing from Exploratory Data Analysis (EDA) to feature scaling using StandardScaler. I conducted rigorous experiments comparing Adam vs. SGD optimizers and various hidden layer architectures to analyze overfitting patterns. The final optimized model achieved a 93.33% Validation Accuracy, demonstrating robust performance in multi-class classification tasks.
- **Projects - Web Profile Desa Bandarejo** (2025): Spearheaded the development of the Web Profile Desa Bandarejo Lampung Selatan to bridge the gap in public information access. Utilizing Laravel and Tailwind CSS, I built a centralized platform that streamlines administrative processes. The system features transparent data visualization for population statistics, social mapping, and community agendas, effectively modernizing the village's information management.
- **Projects - MR.DIY Indonesia Centralized Inventory Management System | IT Project Management Case Study** (2025): Designed a strategic development plan for a Centralized Inventory Information System for MR.DIY Indonesia Head Office. Adopting the Agile Project Management approach, I was involved in drafting the Project Charter, conducting risk analysis, and planning resources to ensure the project met its timeline and budget targets. The system was designed to support digital transformation by integrating real-time stock data, minimizing manual recording errors, and enhancing logistical efficiency.
- **Projects - Sistem Informasi Kamura Bakery (SIMURBA)** (2025): Architected the SIMURBA management information system for Kamura Bakery to drive the company's digital transformation. Leveraging Odoo ERP (Community Edition) on Cloud VPS, I conducted a comprehensive system analysis to address inventory inefficiencies and mitigate fraud risks. Furthermore, I designed a secure network infrastructure and formulated technical and operational risk management strategies, ensuring system sustainability with optimal cost efficiency.
- **Projects - SIANDRE Pondok Pesantren Mahasiswa Al-Awwabin Sukarame Bandar Lampung** (2025): Developed SIANDRE, a digital evaluation platform tailored for Al-Awwabin Islamic Boarding School. Built with Next.js and Node.js, the system addresses the inefficiencies of manual grading by automating the generation of student performance reports. It encompasses both academic and character assessment modules, successfully transforming the institution's administrative process into a streamlined digital workflow.
